# Professional Scrum Developer-oPSD

Intended for anyone involved in software development, this course provides a unique and intensive experience as it guides teams on how to turn product requirements into business value in the form of potentially-releasable increments of done, working software. This is accomplished using the Scrum framework, Visual Studio, and modern Agile development practices.

Through a combination of certified instructor-led training, hands-on activities, and team exercises participants are exposed to the key components of Scrum and the skills required to help successfully develop software using Visual Studio. At course completion, attendees will have had exposure to most of the topic areas outlined in the Professional Scrum Developer Subject Areas [1].

This course is a mix of lecture, demonstration, group discussion, and hands-on software development. The true value of the course is realized as each student collaborates with other team members, on a case study product, using Azure DevOps Services, over several mini-Sprints.

#### Who Should Attend

This course is suitable for any member of a Scrum Development Team, such as those who develop tests, architecture, design, schema, or code. Entire teams are encouraged to attend this course and experience the positive effects of collaborating inside of a timebox according to their definition of done. Each team must be cross-functional, ensuring it has the necessary skills. Product Owners, Scrum Masters, stakeholders, and those evaluating Scrum's effectiveness are welcome to attend, but keep in mind that every attendee will be expected to participate and collaborate equally, working towards the achievement of their team's goals.

# **Prerequisites**

This course assumes that each student has read the Scrum Guide [2], has a basic understanding of Scrum, and is using Visual Studio 2019 Enterprise edition. Failure to meet any of these prerequisites may result in a diminished learning experience.

## **Professional Scrum Developer Certification**

All participants completing the Professional Scrum Developer course will receive a password to attempt the Professional Scrum Developer (PSD) assessment. PSD class participants who attempt the PSD I assessment within 14 days of receiving their free password and do not score at least 85% will be granted a second attempt at no additional cost.

# **Course Outline**

## Fundamentals of the Scrum framework

Scrum roles, artifacts, and events Complementary development practices

## **Application Lifecycle Management**

Visual Studio ALM/DevOps Tools Azure DevOps Scrum process Planning/managing work using Azure Boards

## **Emergent Architecture**

Fitness (fit) for purpose Avoiding upfront requirements and design Developing in slices, not layers Minimizing documentation

## **Quality Code**

Quality code == quality software

TFVC or Git version control
Branching and merging for Scrum Teams
Supporting the various release models

## **Refining the Product Backlog**

Defining and assuring quality

Definition of done

Reporting bugs

In-Sprint vs. out-of-sprint bugs

**INVEST** and 3C techniques

Agile estimation

Wall estimation and Planning Poker techniques

## **Agile Testing**

Testing in parallel with coding

Development, acceptance, and exploratory testing

Unit testing in Visual Studio

Test-Driven Development

Analyzing code coverage

Acceptance testing in Visual Studio

Planning/managing testing using Azure Test Plans

Acceptance Test-Driven Development

**SOLID** principles

Clean code == quality code

Code and test smells

Code quality support in Visual Studio

Code Analysis, Code Metrics, Code Clone Analysis

Continuous Integration (CI)

Automating builds with Azure Pipelines

CI support in Azure Pipelines

Continuous feedback and related tools

Refactoring and refactoring tools

Technical debt and how to pay it back

# **Scrum Challenges**

Getting done and avoiding undone work

Running experiments (spikes)

Cross-functional team collaboration

Not changing Scrum

Overcoming common dysfunctions & case studies

Working with challenging team members

Improving productivity

Becoming a high-performance Scrum Team
