With the prevalence of cyber security breaches, it is clear that more attention is needed in testing that security defenses are in place and working effectively. This course and certification covers much more than just penetration testing. Certainly, penetration testing is an important part of security testing, but there are many other threats and vulnerabilities that require other security testing approaches.

Who Should Attend?

- Security testers
- Software testers who wish to develop a specialty in security testing
- Security administrators who wish to learn how to test new and existing defenses
- Developers who want to learn secure coding techniques
- Project managers who want to learn how security testing fits in the project lifecycle
